

Topology Seminar

Fabien Morel

of Ludwig-Maximilians-Universität will be speaking on

An A^1 -homological criterium for the rigidity property

on April 5 at 4:30 in
MIT Room 2-131

This is one of the main technical step in the proof of the Friedlander-Milnor conjecture, and uses a lot of “classical” topological arguments (lower central series, A^1 -derived functors of the free Lie algebra functors, devissage of the Lie algebra functor in terms of other polynomial functors).
