

# MIT Topology Seminar

*Monday, April 3, 4:30pm*  
*MIT Room 2-142*

Bob Bruner  
(Wayne State University)

speaking on

Homotopy fixed points of  
equivariant S-algebras

Abstract: In joint work with John Rognes, we analyze the homotopy fixed point spectral sequence for the homology of an  $S^1$ -equivariant S-algebra. As a consequence we get good collapse results for spectral sequences involved in the calculation of the topological cyclic homology of many MU-spectra.
